For more than thirty years, the
History of Cartography
Project has charted the course
for scholarship on

cartography, bringing together
research from a variety of
disciplines on the creation,
dissemination, and use of
maps. Volume 6, Cartography
in the Twentieth Century,
continues this tradition with a
groundbreaking survey of the
century just ended and a new
full-color, encyclopedic format.
The twentieth century is a
pivotal period in map history.
The transition from paper to
digital formats led to previously
unimaginable dynamic and
interactive maps. Geographic
information systems radically
altered cartographic
institutions and reduced the
skill required to create maps.
Satellite positioning and
mobile communications
revolutionized wayfinding.
Mapping evolved as an
important tool for coping with
complexity, organizing
knowledge, and influencing
public opinion in all parts of
the globe and at all levels of
society. Volume 6 covers these

changes comprehensively, while *La Civiltà cattolica* thoroughly demonstrating the far-reaching effects of maps on science, technology, and society—and vice versa. The lavishly produced volume includes more than five hundred articles accompanied by more than a thousand images. Hundreds of expert contributors provide both original research, often based on their own participation in the developments they describe, and interpretations of larger trends in cartography. Designed for use by both scholars and the general public, this definitive volume is a reference work of first resort for all who study and love maps.
