The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest

in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country, and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019/20. Many of the newly listed birds are subspecies confined to Kangaroo Island, where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.

Impacts of Habitat Transformation on Species, Biodiversity and Ecosystems in Asia Cornell University Press

An examination of the struggle to conserve biodiversity in urban regions, told through the story of the threatened coastal California gnatcatcher. The story of the rare coastal California gnatcatcher is a parable for understanding the larger ongoing struggle to conserve biodiversity in regions confronted with intensifying urban development. Because this gnatcatcher depends on vanishing coastal sage scrub in Southern California, it has been regarded as a flagship species for biodiversity protection since the early 1990s. But the uncertainty of the gnatcatcher's taxonomic classification--and whether it can be counted as a "listable unit" under the Endangered Species Act--has provoked contentious debate among activists, scientists, urban developers, and policy makers. Synthesizing insights from ecology, environmental history, public policy analysis, and urban planning as she tracks these debates over the course of the past twenty-five years, Audrey L. Mayer presents an ultimately optimistic take on the importance of much-neglected regional conservation planning strategies to create sustainable urban landscapes that benefit humans and wildlife alike.

Plan your landscape or garden with more than 100 native plants that benefit birds, bees, and butterflies in Northern California. The presence of birds, bees, and butterflies suggests a healthy, earth-friendly place. These most welcome guests also bring joy to those who appreciate watching them. Now, you can turn your yard into a perfect habitat that attracts them and, more importantly, helps them thrive. Professional nature photographer and botanist George Oxford Miller provides all the information you need in this must-have guide for Northern California. Learn how to landscape and create pollinator gardens with native plants. The book begins with an in-depth introduction to native pollinators and to birds. It's followed by a "field guide" section to more than 100 native plants that are widely available to utilize, are easy to care for, and provide great benefit to birds, bees, and butterflies. The species are organized by level of sunlight needed and then by plant types. Each species includes full-color photographs and information about hardiness zones, what they are most likely

to attract, soil requirements, light levels, and George's notes. As an added bonus, you'll make use of blooming charts, tips on attracting specific species, and more! Plus, the invaluable garden plans and projects show you just what to do and can be customized to suit your own specific interests. Plan, plant, and grow your beautiful garden, with native plants that benefit your favorite creatures to watch and enjoy.

Welcoming birds to your yard isn't about choosing the right feeders and bird food. If you want to attract the widest range of birds to your home, you need to plant a diversity of native plants. Why go green? Native plants live longer; they are drought resistant, take less water and fertilizer, they cost less, are less work and easier to maintain. And a big plus—they are good for the environment. In 2007, Douglas Tallamy published the groundbreaking book, *Bringing Nature Home*, on going native to protect wildlife. Since then Cornell Laboratory of Ornithology, the National Wildlife Federation, and National Audubon have all endorsed and encouraged gardening with native plants. *Planting Native to Attract Birds to Your Yard* is the first book to cover planting native to specifically attract birds. The book recommends plants for all types of backyards, no matter how large or small—from large plots to container gardens. Sorenson gives state-specific recommendations for 31 Eastern U.S. states for native plants that support birds during the four seasons. The book covers the full gamut of native plants—76 species of trees, shrubs, bushes, vines, grasses, perennials, and annuals—and gives details on why specific plants are bird friendly and how to choose plants that work successfully in attractive home landscapes. Includes 66 bird species, all shown in dramatic color photos. Birders, gardeners, and landscapers—all who love birds and beautiful gardens—will find this book a must.

In this stunning book, Lars Jonsson celebrates and explores the beauty of the birds that surround him during the Swedish winter months. Inspired by the desolate, wintry landscapes, the dazzling light and the stark contrast of colours he observes against the snow, Jonsson has created an unparalleled collection of art. Jonsson illustrates each bird in his classic style, and his text provides information on their behaviour and insights into how to identify them as he shares personal observations as both an artist and ornithologist. This unique combination offers an intimate and compelling opportunity to better understand the method behind one of the world's preeminent bird artists.

*Urban Raptors* is the first book to offer a complete overview of urban ecosystems in the context of bird-of-prey ecology and conservation. This comprehensive volume examines the urban environment, explains why some species adapt to urban areas but others do not, and introduces modern research tools to help in the study of urban raptors. It delves into climate change adaptation, human-wildlife conflict, and the unique risks birds of prey face in urban areas before concluding with real-world wildlife management case studies and suggestions for future research and conservation efforts. Among researchers, urban green space planners, wildlife management agencies, birders, and informed citizens alike, *Urban Raptors* will foster a greater understanding of birds of prey and an increased willingness to accommodate them as important members, not intruders, of our cities.

From urban rooftops to open meadows, the incredible diversity of gardens in the British Isles can provide refuge and feeding opportunities

for a vast array of birds. Even the smallest gardens can attract some birdlife and watching garden birds is a great joy for all nature lovers, brightening each day and providing an immediate connection with the wider and wilder world beyond the fence. Nature is facing challenges throughout the world, including right here in the UK, and the changing fortunes of our garden birds are strong indicators of the overall health of our wildlife. With information on how to encourage birds to visit our gardens and boost their survival and breeding success, and how to identify them, this book describes the small steps we can all take to help these birds survive the hardships of winter and bright forth a healthy new generation that we can recognise, appreciate and enjoy for decades to come. *RSPB Garden Birds* is a lavish celebration of 47 of our most frequent and familiar garden birds, and the final chapter looks at some of the less regular – but equally welcome – visitors. Detailed biographies outline each species' life history, distribution, behaviour and breeding habits, and an extensive introduction provides guidance on the general practicalities of garden birdwatching and managing a wildlife garden. Featuring more than 200 spectacular photographs revealing every detail of our garden birds' appearance and behaviour, this book will appeal to anyone who has discovered their love of wildlife through watching the birds in their garden.

Darryl Jones is fascinated by bird feeders. Not the containers supplying food to our winged friends, but the people who fill the containers. Why do people do this? Jones asks in *The Birds at My Table*. Does the food even benefit the birds? What are the unintended consequences of providing additional food to our winged friends? Jones takes us on a wild flight through the history of bird feeding. He pinpoints the highs and lows of the practice. And he ponders this odd but seriously popular form of interaction between humans and wild animals. Most important, he points out that we know very little about the impact of feeding birds despite millions of people doing it every day. Unerringly, Jones digs at the deeper issues and questions, and he raises our awareness of the things we don't yet know and why we really should. Using the latest scientific findings, *The Birds at My Table* takes a global swoop from 30,000 feet down to the backyard bird feeder and pushes our understanding of the many aspects of bird feeding back up to new heights.

*The Routledge Handbook of Tourism Cities* presents an up-to-date, critical and comprehensive overview of established and emerging themes in urban tourism and tourist cities. Offering socio-cultural perspectives and multidisciplinary insights from leading scholars, the book explores contemporary issues, challenges and trends. Organised into four parts, the handbook begins with an introductory section that explores contemporary issues, challenges and trends that tourism cities face today. A range of topics are explored, including sustainable urban tourism, overtourism and urbanisation, the impact of terrorism, visitor – host interactions, as well as reflections on present and future challenges for tourism cities. In Part II the marketing, branding and markets for tourism cities are considered, exploring topics such as destination marketing and branding, business travellers and exhibition hosting. This section combines academic scholarship with real-life practice and case studies from cities. Part III discusses product and technology developments for tourism cities, examining their supply and impact on different travellers, from open-air markets to creative waterfronts, from social media to smart cities. The final Part offers examples of how urban tourism is developing in different parts of the world and how worldwide tourism cities are adapting to the challenges ahead. It also explores emerging forms of specialist tourism, including geology and ecology-based tourism, socialist heritage and post-communist destination tourism. This handbook fills a notable gap by offering a critical and detailed understanding of the diverse elements of the tourist experience today. It contains useful suggestions for practitioners, as well as examples for theoretical frameworks to students in the fields of urban tourism and tourism cities. The handbook will be of interest to scholars and students working in urban tourism, heritage studies, human geography, urban studies and urban planning, sociology, psychology and business studies.

**Re-Imagining Spaces and Places** North Light Books

The last comprehensive review of Nottinghamshire's birds was produced more than four decades ago. Much has changed since then, and a new avifauna is long overdue. This book draws together historic reports from the nineteenth century, records from the files of the county bird club (Nottinghamshire Birdwatchers), and data from national and regional surveys and monitoring programmes. The resulting account presents an

overview of the present state of the county's birdlife, set against a context of environmental and climatic change. The gravel pits in the Trent and Idle Valleys form major corridors for birds moving across Britain and Nottinghamshire has attracted more than its share of national rarities. These include Britain's first Egyptian Nightjar and Lesser Yellowlegs in the nineteenth century, Bufflehead, Redhead, Cedar Waxwing and breeding Black-winged Stilts in the twentieth century, and a memorable nesting attempt by European Bee-eaters in 2017. The woods and heaths of Sherwood lying in the middle of the county also provide a haven for an array of iconic species including European Nightjar, Eurasian Woodcock, Honeybuzzard and Hawfinch. This book describes the past and present status of the 334 species that have been recorded in Nottinghamshire up to 2018. Lavishly illustrated with photographs taken within the county, and sketches from the internationally recognised artist Michael Warren, it is intended to be an authoritative reference to the birds of Nottinghamshire.

Today, 20 percent of the global food supply relies on urban agriculture: social-ecological systems shaped by both human and non-human interactions. This book shows how urban agroecologists measure flora and fauna that underpin the ecological dynamics of these systems, and how people manage and benefit from these systems. It explains how the sociopolitical landscape in which these systems are embedded can in turn shape the social, ecological, political, and economic dynamics within them. Synthesizing interdisciplinary approaches in urban agroecology in the natural and social sciences, the book explores methodologies and new directions in research that can be adopted by scholars and practitioners alike. With contributions from researchers utilizing both social and natural science approaches, *Urban Agroecology* describes the current social-environmental understandings of the science, the movement and the practices in urban agroecology. By investigating the role of agroecology in cities, the book calls for the creation of spaces for food to be sustainably grown in urban spaces: an Urban Agriculture (UA) movement. Essential reading for graduate students, practitioners, policy makers and researchers, this book charts the course for accelerating this movement.

Birds are the most diverse group of land vertebrates and have evolved to exploit almost every terrestrial niche on earth. They also serve as a natural reservoir for an array of different pathogens that pose serious health risks to human and domestic animal populations, including West Nile virus, highly pathogenic avian influenza viruses, Newcastle Disease virus, and numerous enteric pathogens. Avian diseases are also critically important to the conservation of endemic bird species in many places around the world. This accessible textbook focuses on the dynamics of infectious diseases for wild avian hosts across every level of ecological hierarchy, from the way pathogens interact with the physiology and behavior of individual hosts, the evolutionary and ecological dynamics of the host-parasite interactions occurring within populations, up to the complex biotic and abiotic interactions occurring within biological communities and ecosystems. Parasite-bird interactions are also increasingly occurring in rapidly changing global environments - thus, their ecology is also changing - and this shapes the complex ways by which parasites influence the inter-connected health of birds, humans, and shared ecosystems. Given the key role of birds in ecological communities more broadly, and as the primary host to so many zoonotic pathogens, an understanding of the ecological and evolutionary principles underlying the maintenance, amplification, transmission, and dispersal of these infectious agents is crucial to understanding how to mitigate the negative global impacts of the ever-increasing number of emerging infectious diseases. Although the topics and principles discussed in this book relate to birds, they have a far wider relevance and can also be applied to non-avian, wildlife host-pathogen systems. The COVID-19 pandemic has shown that understanding of disease ecology in wild animal populations is paramount to global health. *Infectious Disease Ecology of Wild Birds* is suitable for

both senior undergraduate and graduate students taking courses in avian disease ecology, ecoimmunology, ecology, and conservation. It will also appeal to the many professional parasitologists, ecoimmunologists, ornithologists, behavioural ecologists, conservation biologists, and wildlife biologists requiring a concise overview of the topic.

When a bird flies into their window by accident, Callum and his sister, Emmy, learn that from the outside, the glass looks just like the sky. They also learn that the United States has lost a lot of birds in recent years—and that there are lots of things their family can do to help. First, they set out feeders and make the windows safe. Then, for the winter, they build a little shelter and put out a heated birdbath. By springtime, all kinds of birds are visiting their yard! But with such a big problem, is there more they can do to make a difference?
