Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, Health Data in the Information Age provides a clear set of guidelines and principles for exploiting the

potential benefits of aggregated health data--without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. Health Data in the Information Age offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

The Framework, an official AOTA document, presents a summary of interrelated constructs that define and guide occupational therapy practice. The Framework was

---

developed to articulate occupational therapy's contribution to promoting the health and participation of people, organizations, and populations through engagement in occupation. The revisions included in this second edition are intended to refine the document and include language and concepts relevant to current and emerging occupational therapy practice. Implicit within this summary are the profession's core beliefs in the positive relationship between occupation and health and its view of people as occupational beings. Numerous resource materials include a glossary, references and a bibliography, as well as a table of changes between the editions.

In a workshop organized by the Clinical Research roundtable, representatives from purchaser organizations (employers), payer organizations (health plans and insurance companies), and other stakeholder organizations (voluntary health associations, clinical researchers, research organizations, and the technology community) came together to explore: What do purchasers and payers need from the Clinical Research Enterprise? How have current efforts in clinical research

met their needs? What are purchasers, payers, and other stakeholders willing to contribute to the enterprise? This book documents these discussions and summarizes what employers and insurers need from and are willing to contribute to clinical research from both a business and a national health care perspective. Increasingly over the past five years, uncertainty about reimbursement for routine patient care has been suspected as contributing to problems enrolling people in clinical trials. Clinical trial investigators cannot guarantee that Medicare will pay for the care required, and they must disclose this uncertainty to potential participants during the informed consent process. Since Medicare does not routinely "preauthorize" care (as do many commercial insurers) the uncertainty cannot be dispelled in advance. Thus, patients considering whether to enter trials must assume that they may have to pay bills that Medicare rejects simply because they have enrolled in the trial. This report recommends an explicit policy for reimbursement of routine patient care costs in clinical trials. It further recommends that HCFA provide additional support for selected clinical trials, and that the government support the establishment of a national clinical trials registry. These policies (1) should assure that beneficiaries would not be denied coverage merely because they have volunteered to

---

participate in a clinical trial; and (2) would not impose excessive administrative burdens on HCFA, its fiscal intermediaries and carriers, or investigators, providers, or participants in clinical trials. Explicit rules would have the added benefit of increasing the uniformity of reimbursement decisions made by Medicare fiscal intermediaries and carriers in different parts of the country. Greater uniformity would, in turn, decrease the uncertainty about reimbursement when providers and patients embark on a clinical trial.

You've survived quarantine but you get back to school and they tell you more than an injection is required. They will give you success. They'll give you an excellent future. You just have to give them your mind. It's one year after distance learning and similar to the school system, troubled students like Zeke Thompson still haven't recovered. He and his friends gained notoriety last year for scheduled fist fights, destruction of public property, and oppositional defiance disorders. A mysterious corporation and politician claim they have a solution for problems like him. The GRO Initiative makes some big promises for even bigger results. The initial

changes are great but with compliance comes a dark cost that Zeke isn't willing to pay. When he and his friends stumble upon a shocking truth, one wrong move could lead to their silence, or worse. The fire is spreading, and he has a choice to make: Lose his mind and join the hive, or stay true to his identity and burn the institution to the ground?
