Graziani's recent Cisco Networking Academy Conference presentation on IPv6 Fundamentals and Routing drew a standing audience and the largest virtual audience for any session at the event. He previously worked for companies including Santa Cruz Operation, Tandem Computers, and Lockheed.

- Understand how IPv6 overcomes IPv4's key limitations
- Compare IPv6 with IPv4 to see what has changed and what hasn't
- Represent IPv6 addresses, including subnet addresses
- Enable IPv6 on router interfaces using static, dynamic, EUI-64, unnumbered, SLAAC, and DHCPv6 approaches
- Improve network operations with ICMPv6 and Neighbor Discovery Protocol
- Configure IPv6 addressing and Access Control Lists using a common topology
- Work with IPv6 routing tables and configure IPv6 static routes
- Compare, configure, and verify each IPv6 IGP routing protocol
- Implement stateful and stateless DHCPv6 services
- Integrate IPv6 with other upper-level protocols, including DNS, TCP, and UDP
- Use dual-stack techniques to run IPv4 and IPv6 on the same device
- Establish coexistence between IPv4 and IPv6 through manual, 6to4, or ISATAP tunneling
- Promote a smooth transition with NAT64 (Network Address Translation IPv6 to IPv4)
