*Gear Materials and Heat Treatment Manual* Society of Manufacturing Engineers  
The cultural universe of urban, English-speaking middle class in India shows

signs of growing inclusiveness as far as English is concerned. This phenomenon manifests itself in increasing forms of bilingualism (combination of English and one Indian language) in everyday forms of speech - advertisement jingles, bilingual movies, signboards, and of course conversations. It is also evident in the startling prominence of Indian Writing in English and somewhat less visibly, but steadily rising,

---

activity of English translation from Indian languages. Since the eighties this has led to a frenetic activity around English translation in India's academic and literary circles. Kothari makes this very current phenomenon her chief concern in *Translating India*. The study covers aspects such as the production, reception and marketability of English translation. Through an unusually multi-disciplinary approach, this study situates English translation in India amidst local and global debates on translation, representation and authenticity. The case of Gujarati - a case study of a relatively marginalized language - is a unique addition that demonstrates the micro-issues involved in translation and the politics of language. Rita Kothari teaches English at St. Xavier's College, Ahmedabad (Gujarat), where she runs a translation research centre on behalf of Katha. She has published widely on literary sociology,

postcolonialism and translation issues. Kothari is one of the leading translators from Gujarat. Her first book (a collaboration with Suguna Ramanathan) was an English translation of Gujarati poetry (*Modern Gujarati Poetry: A Selection*, Sahitya Akademi, New Delhi, 1998). Her English translation of the path-breaking Gujarati Dalit novel *Angaliyat* is in press (*The Stepchild*, Oxford University Press). She is currently working on an English translation of Gujarati short stories by women of Gujarat, a study of the nineteenth-century narratives of Gujarat, and is also engaged in a project on the Sindhi identity in India.

This is the first book to offer a complete presentation of bevel gears. An expert team of authors highlights the areas of

---

application for these machine elements and presents the geometrical features of bevel gears as well as the various gear cutting processes based on gear cutting theory. The aspect of three-dimensional gearing is assessed in detail in terms of flank design, load capacity and noise behavior. A representation of production processes with the required technologies provides a knowledge base on which sound decisions can be based. The authors offer a thorough introduction to the complex world of bevel gears and present the rapid advances of these machine elements in a detailed, comprehensible manner. This book addresses design engineers in

mechanical engineering and vehicle manufacturing, as well as producers of bevel gears and students in mechanical engineering.

This book was undertaken to provide a text and reference on the theory and practice of the FFT and its common usage.

This book is organized in only four chapters, and is intended as a tutorial on the use of the FFT and its

trade space. The trade space of the FFT is the parameters in its usage and the relationships between them - the sample rate, the total number of points or the interval over which processing occurs in a single FFT, the selectivity of tuning to a given frequency over signals out-of-band, and the bandwidth over which a signal appears. The examples given in this text are in FORTRAN 9512003. FORTRAN 2003 was frozen as a standard while this work was in progress. The listings given here are intended as an aid in understanding the FFT and associated algorithms such as spectral window weightings, with the goal of making the best of them more accessible to the reader. The code I use here provides a simple bridge between the material in the text and implementation in FORTRAN 2003, C++, Java, MATLAB ©, and

---

other modern languages.  
The examples are sufficiently simple to be translated into older languages such as C and FORTRAN 77 if desired.

There is a great deal of interest and activity in the interdisciplinary space between the visual arts and architecture. Many artists use building materials or architectural representations.

Architects and critics

speaking, with few cautions, of architecture as "art".

Is it possible, then, that architecture is returning to a longer-term, older position as an art with sibling relations to other disciplines? What is it today to speak of architecture as an art, and what should we make of the long history of this question? The essays in this volume address these issues on conceptual and historical grounds, the writers drawing from papers and discussions presented at a colloquium of the Architecture Theory, Criticism and History (ATCH) Research Group of the University of Queensland, Australia, hosted by Brisbane's Institute for Modern Art on August 17 and 18, 2007.
