There is no HR-related topic more popular in the business press than performance management (PM). There has been an explosion in writing on this topic in the past 5 years, condemning it as a failure and calling for fundamental change. The vast majority of organizations use the same basic process which I call "Last Generation Performance Management" or PM 1.0 for short. Despite widespread agreement that PM 1.0 is failing, few companies have abandoned it or made fundamental changes to it. While everyone agrees it is broken, few agree on how to fix it. Companies continue to tinker with their systems, making incremental changes every few years with no lasting improvement in effectiveness. Employees continue to achieve amazing things in organizations every day, despite this process not because of it. Nothing has worked because organizations, business leaders and HR professionals focus on PM practices instead of the fundamental purpose of PM and the paradigms, assumptions, and beliefs that underlie the practices. Companies ask their performance management process to do too many things and it fails at all of them as a result. At the foundation of PM 1.0 practices is the ideology of a meritocracy and paradigms

rooted in standard economic and psychological theories. While these theories were adequate explanations for motivation and behavior in the 19th and 20th centuries, they fail to account for the increasingly complex nature of organizations and their environments today. Despite the ineffectiveness of PM 1.0, there are powerful forces holding it in place. Information on rigorous, evidence-based recommendations is crowded out by benchmarking information, case studies of high-profile companies, and other propaganda coming from HR think tanks and consultants. Business leaders and HR professionals learn about common practices not effective practices. This book confronts the traditional dogma, paradigms, and practices of PM 1.0 and holds them up to the bright light of scientific scrutiny. It encourages HR professionals and business leaders to abandon PM 1.0 and it offers up a more appropriate purpose for PM, alternative paradigms to guide them and practical solutions that are better supported by scientific research, referred to as “ Next Generation Performance Management or PM 2.0 for short.

The area of work and aging is complex and multi-faceted. Its foundation is formed by a wide array of disciplines that both contribute to the complexity of its understanding, and offer fertile promise for research, development, and application in the years ahead. With an ever-growing population of older workers, many of whom are suggesting they will likely continue to work past traditional retirement age, it becomes all the more important that we increase our efforts to develop a more thorough understanding of older workers, the nature of their interactions with work and the organizations for which they work, and the process of transitioning to retirement. Clearly, there are huge societal and global challenges that will both inform and influence research and application at the individual and organizational levels. The Oxford Handbook of Work and Aging examines the aging workforce from an individual worker, organization, and societal perspective, and offers both an integration of current cross-disciplinary knowledge, and a roadmap for where research and application should be focused in the future to address issues of an aging workforce. The volume is divided into six core sections: demography, theoretical and methodological issues, the older worker, organizational strategies for an older workforce, individual and organizational perspectives on work and retirement, and societal perspectives with an aging workforce. Bringing together seasoned authors from diverse academic and professional backgrounds, new approaches to recruiting, workplace flexibility, and the right mix of benefits and incentives are presented as a way of engaging an older workforce.
