Blending scientific fact and sports trivia, Robert Adair examines what a baseball or player in motion does- and why. How fast can a batted ball go? What effect do stitch patterns have on wind resistance? How far

does a curve ball break? Who reaches first base faster after a bunt, a right- or left-handed batter? The answers are often surprising—and always illuminating. This newly revised third edition considers recent developments in the science of sport such as the neurophysiology of batting, bat vibration, and the character of the "sweet spot." Faster pitchers, longer hitters, and enclosed stadiums also get a good, hard scientific look to determine their effects on the game. Filled with anecdotes about famous players and incidents, *The Physics of Baseball* provides fans with fascinating insights into America's favorite pastime.

In the movie *Bull*

Durham, frustrated

manager Joe Riggins stresses to his team, "This is a simple game. You throw the ball. You hit the ball. You catch the ball." This simplification works well for biomechanists too, as sports can be broken down into specific physical tasks like throwing, hitting, catching, and running. There have been significant advances in understanding some actions, but not others. In the first ten years of the journal *Sports Biomechanics*, only 18 of 236 articles were about hitting a ball. This scarcity is startling considering that according to USA Today (May 20, 2005), three of the five hardest things to do in sports involve hitting a ball (#1: baseball batting, #4: golf tee shot, and #5: tennis serve return). This book provides the latest biomechanical research in the under-studied field of hitting a ball. The biomechanics of baseball, cricket, hockey, hurling, softball, table tennis, and tennis are all examined. The chapters are written in a style that will both

satisfy the high standards of biomechanists and provide information for instructors and athletes to improve performance. This book is based on a special issue of *Sports Biomechanics*.

The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a

concise, introductory textbook in this area.

Automotive Aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for

future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers

emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

Jeff Riley, Rileys father, who was a junior college baseball star who became an architect and took his little league baseball team that his firm sponsored to a little league championship. He got laid off from his job for six months and was offered to be a manager of the big leagues, and Matt Schultz, a college baseball and cape league star who ended up as a librarian in the New York Public Library, dreams about playing in the Baseball League. He was invited to spring training by accident when there was another Schultz that was invited to spring training. These are the players he invites to camp who can turn this team around with a two-year losing streak against a greedy corporate raider named Dalton

Reynolds, who hates the Yondala and wants to tear down the stadium build condos and hotels that will make him a fortune. Ryan is on a mission to save his team from a greedy investor who made a bet: if this failing team wins the pennant, he will invest a lot of money in the team, and if he loses, hell tear it down. In its second edition, this ground-breaking study provides the known details for 150 years of game-related deaths, identifies contributing factors and discusses resulting

changes to game rules, protective equipment, crowd control and stadium structures and grounds. Topics covered include pitched and batted-ball fatalities, weather and field condition accidents, structural failures, fatalities from violent or risky behavior and deaths from natural causes.

? Electric propulsion for boats was developed in the early 19th century and—despite the advent of the internal combustion engine—continued with the perfecting of the modern turbo-electric ship. Sustainable and hybrid technologies, pioneered in small inland watercraft toward the end of the 20th century, have in recent years been scaled up to create integrated electric drives for the largest ocean-going vessels. This comprehensive history traces the birth and rebirth of the electric boat from 1835 to the present, celebrating the Golden Age of electric

launches, 1880–1910.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and

mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

Getting Filthy John Wiley & Sons

"The risk of a fatal catastrophe was constant. The NVA was the enemy, but the ultimate opponent was, quite simply, death. . . ." For assault helicopter crews flying in and around the NVA-infested DMZ, the U.S. pullout from Vietnam in 1970-71 was a desperate time of selfless courage. Now former army warrant officer Tom Marshall of the Phoenix, C Company, 158th Aviation Battalion, 101st Airborne, captures the deadly mountain terrain, the long hours flown under enormous stress, the grim determination of hardened

pilots combat-assaulting through walls of antiaircraft fire, the pickups amid exploding mortar shells and hails of AK fire, the nerve-racking string extractions of SOG teams from North Vietnam. . . . And, through it all, the rising tension as helicopter pilots and crews are lost at an accelerating pace. It is no coincidence that the Phoenix was one of the most highly decorated assault helicopter units in I Corps. For as the American departure accelerated and the enemy added new, more powerful antiaircraft weapons, the helicopter pilots, crew chiefs, and gunners paid the heavy price of withdrawal in blood. For more than 30 Percent of Tom Marshall's 130 helicopter-school classmates, the price of exit was their lives. . . .

SWAG 101 by Rob Crews "The trajectory of learning has changed, therefore the trajectory

of teaching must change as well. Be innovative in player development." "I love talking the game with Rob Crews, especially when you talk about hitters. The insight that Rob has given me when it comes down to his perspective on hitting has been very beneficial to me as a hitting coach. You are not going to find another hitting coach as passionate as Coach Crews."

-TIM WALTON Head Coach, University of Florida Softball "Rob breaks down teaching and learning not only for athletes but for the common everyday citizen. I recommend SWAG 101 to everyone interested in becoming more knowledgeable of the teaching and learning process no matter your intelligence level."

-ORV FRANCHUK Hitting Coach, Los Angeles Dodgers "SWAG 101 teaches hitting and the mental game from a player's perspective. His innovative ideas and strategies are straight forward and keep the game simple. I'm proud to call Rob a teacher and a friend." -HOWARD DOBSON Hitting Coach LSU, Team USA Softball "This book is an absolute

must read for those players aspiring to reach the top level game! SWAG - the secret weapon all great hitters possess but are reluctant to share." -LAUREN GIBSON 2013 SEC Player of the Year, Team USA Softball "Rob knows hitting and more importantly he knows hitters. In SWAG 101, hitters learn to know themselves through his teachings - perhaps the most critical piece to the performance puzzle."

-KRIS HERMAN Head Coach, Williams College Softball "The book does a great job of tying in the various components of learning and how important each aspect is to an athlete in their own development. Rob is world class when it comes to showing the countless ways there are for an athlete to improve -not just with the physical, but more importantly the mental facet."

-MIKE STEUERWALD Head Coach, Chicago Bandits, NPF "The bottom line is most athletes with great swings and great form, aren't even that good! So what makes them good? SWAG 101 is about Invisible Mechanics -the mechanics that we can't see. What

goes on under the hood. Most of which precedes the swing. Its about perception. Organzing your thoughts. In this book, the author digs deeper into the athlete's operating system. Invisible Mechanics is the brain working together with the eyes to create a faster, more efficient response from the body. The COMPLETE GAME instructional model, as narrated by Rob Crews, combines mind/body research outlining and how effective teaching is continuing to evolve.

McDonnell's F-101 Voodoo series was in many ways the most interesting of the 'Century Series' fighter programmes of the 1950s, partly because the type's design and intended mission changed radically during a 40-year career. Originally designed as a fighter-bomber, it was converted to be a reconnaissance aircraft, serving alongside the U-2 and RF-8 Crusaders during the Cuban Missile Crisis and the Vietnam War. Although it gained a reputation as a difficult aircraft to handle, the jet's supersonic speed and newly-developed camera suite

enabled it to conduct vital low-altitude photo-reconnaissance missions over heavily-defended target areas. In combat, the RF 101 was usually 'first in-last out' for strike missions. This made it a ready target, with a solo aircraft flying straight and level to gather target photo evidence at low-altitude offering enemy gunners plenty of opportunity to shoot the Voodoo down. This study tells the combat stories of this extraordinary aircraft, highlighting the difficulty of the missions on which it was sent and the courage of its pilots.
