Applying the second of the given boundary conditions shows that the function () f t has the following value: 2 () f t R R Thus the radial velocity in the fluid at any distance r from the sphere at any

time t will be: $2 \int \frac{R}{r} dt = 2R \ln r + C$ Integrating the foregoing equation with respect to r yields the result: $2 \int \frac{R}{r} dt = 2R \ln r + C$ where C is some function of time.
