Gravity might thus seem to be negligible. But  
three other facts explain why it is important and  
where it is important. First, gravity is a universal  
force coupling to all forms of mass and energy.  
Second, gravity is a long-range force in contrast  
to the weak and strong forces which are  
characterized by nucleus-size ranges and below.

At my uni, they use Hartle for the undergraduate GR  
course which sucks because like you I hate the  
"physics - first" approach taken in Hartle. The partial  
solutions in Foster was definitely a nice touch since  
no other GR book I know (excluding the Straumann  
one you recently showed me) actually has a solutions  
manual or even partial solutions ...

An introductory, undergraduate text in general  
relativity at the junior senior level. The development  
follows a physics first approach. The simplest  
physically relevant solutions of the Einstein equation  
are presented first, without derivation, to be explored  
and applied to realistic astrophysical situations like  
black holes, gravitational radiation, and the beginning  
of the universe.

I've started learning GR from Hartle's "Gravity: An Introduction ...". It's all going well, but I feel I could benefit from solutions to some of the key problems. I assume Hartle hasn't published a companion solution guide. A few options show up on line. One by Jorge Ramos, for example. Besides, as ...
