Corporate governance is a complex idea that is often inappropriately simplified as a cookbook of recommended measures to improve financial performance. Meta studies of published research

show that the supposed benign effects of these measures - independent directors or highly incentivised executives - are at best context-specific. There is thus a challenge to explain the meaning, purpose, and importance of corporate governance. This volume addresses these issues. The issues discussed centre on relationships within the firm e.g. between labour, managers, and investors, and relationships outside the firm that affect consumers or the environment. The essays in

this collection are the considered selection by the editors and the contributors themselves of what are seen as some of the most weighty and urgent issues that connect the corporation and society at large in developed economies with established property rights. The essays are to be read in dialogue with each other, giving a richer understanding than could be obtained by shepherding all contributions into a single mould. Nevertheless taken together they demonstrate a shared

sense of deep concern that the corporate governance agenda has been and still is on the wrong track. The contributors, individually and collectively, identify in this compendium both a research programme and a platform for change.

This volume is the first collective study of a foundational text in modern philosophy and logic, Gottlob Frege's Basic Laws of Arithmetic which

appeared in two volumes in 1893 and 1903. Twenty-two Frege scholars discuss a wide range of philosophical and logical topics arising from Basic Laws of Arithmetic, and demonstrate the technical and philosophical richness of the work. Their original contributions make vivid the importance of this magnum opus not just for Frege scholars but for the study of the history of logic, mathematics, and philosophy.

account of the human herpesviruses provides an encyclopedic overview of their basic virology and clinical manifestations. This group of viruses includes human simplex type 1 and 2, Epstein–Barr virus, Kaposi's Sarcoma-associated herpesvirus, cytomegalovirus, HHV6A, 6B and 7, and varicella-zoster virus. The viral diseases and cancers they cause are significant and often recurrent. Their prevalence in the developed world accounts for a major burden of disease, and as a

result there is a great deal of research into the pathophysiology of infection and immunobiology. Another important area covered within this volume concerns antiviral therapy and the development of vaccines. All these aspects are covered in depth, both scientifically and in terms of clinical guidelines for patient care. The text is illustrated generously throughout and is fully referenced to the latest research and developments.

Attachment theory is among the most popular theories of human socioemotional development, with a global research community and widespread interest from clinicians, child welfare professionals, educationalists and parents. It

has been considered " about family life in modern society. It is one of the last of the grand theories of human development that still retains an active research tradition. Attachment theory and research speak to fundamental questions about human emotions, relationships and development. They do so in terms that feel experience-near, with a remarkable combination of intuitive ideas and counter-intuitive assessments and conclusions. Over time, attachment theory

In 1994, the expert knowledge of Ram Gokal and Karl D. Nolph, the two foremost figures in the field of peritoneal dialysis, was combined to produce the first edition of the Textbook of Peritoneal Dialysis. The work quickly became recognised as the 'gold standard' for those working in the field. Since its conception, however, our understanding of peritoneal dialysis related physiology, kinetics and clinical outcomes, as well as the concepts of intraperitoneal chemotherapy, has increased sufficiently to make an updated and completely revised edition

of the work necessary. An expansion of the editorial team by fellow-experts Ramesh Khanna and Raymond Krediet enabled an even more comprehensive approach to be taken. This second edition reasserts the book's uniqueness in its detailed discussion of the topic, making it required reading for all those working within the field of peritoneal dialysis.

Introduce your students to strategic management with the market-leading text that sets the standard for the course area. Written by respected scholars

who have taught strategic management at all educational levels, Hitt, Ireland, and Hoskisson's latest edition provides an intellectually rich, yet thoroughly practical, analysis of strategic management. The classic industrial organization model is combined with a resource-based view of the firm to provide students with a complete understanding of how today's businesses establish competitive advantages and create value for stakeholders. Cutting-edge research is presented with a strong global focus, featuring more than 500 emerging and established companies. All-new opening cases introduce chapter concepts and mini cases offer new contexts of

The completely revised and updated, definitive resource for students and professionals in organic chemistry The revised and updated 8th edition of March's Advanced Organic Chemistry: Reactions, Mechanisms, and Structure explains the theories of organic chemistry with examples and reactions. This book is the most comprehensive resource

about organic chemistry available. Readers are guided on the planning and execution of multi-step synthetic reactions, with detailed descriptions of all the reactions. The opening chapters of March's Advanced Organic Chemistry, 8th Edition deal with the structure of organic compounds and discuss important organic chemistry bonds, fundamental principles of conformation, and stereochemistry of organic molecules, and reactive intermediates in organic chemistry. Further coverage concerns general principles of

mechanism in organic chemistry, including acids and bases, photochemistry, sonochemistry and microwave irradiation. The relationship between structure and reactivity is also covered. The final chapters cover the nature and scope of organic reactions and their mechanisms. This edition: Provides revised examples and citations that reflect advances in areas of organic chemistry published between 2011 and 2017 Includes appendices on the literature of organic chemistry and the classification of reactions according to the compounds prepared Instructs

the reader on preparing and conducting multi-step synthetic reactions, and provides complete descriptions of each reaction. The 8th edition of March's Advanced Organic Chemistry proves once again that it is a must-have desktop reference and textbook for every student and professional working in organic chemistry or related fields. Winner of the Textbook & Academic Authors Association 2021 McGuffey Longevity Award. Hysteroscopy Springer Science & Business Media This book offers a cutting-edge guide to hysteroscopy and

provides readers with the latest and most essential information on procedure techniques, clinical advances and international developments in practice and treatment of endometrial pathology. Providing comprehensive coverage, it explains in detail every aspect of hysteroscopy, from diagnostics to hysteroscopic surgery. As such, it addresses the bases of hysteroscopy; pre-, intra- and post-hysteroscopy medications; intracavitary pathologies; fertility issues; and surgical implications and complications. At the same time, it also

explores challenging and controversial topics, such as hysteroscopy and ART, submucous myomas, and uterine malformations. All topics are discussed by prominent experts in the field, and clearly organized and illustrated to help readers gain the most from each chapter. Accordingly, the book offers a valuable resource for all gynecologists working at hysteroscopy units, reproductive units, gynecological and oncological units, as well as a quick reference guide for all other physicians interested in the

topic.

This book reflects the outcome of contribution by the plural community and of the interactions between disciplines. With the mass of data available through Information and Communication Technologies (ICT) in an unprecedented quantity since the Human History, it is now possible to access dimensions of knowledge

that, though not hidden, could not be grasped in the same way in the past. The question of how this information can be used for the benefit of institutional and economic actors to foster the development of a territory. Tackling the issue from a resolutely interdisciplinary perspective, the authors explore the theories and methods of complex systems in order to discuss how they can contribute in these new circumstances to territorial intelligence and to the development practices in

which it is embodied. This book illustrates how today's research explores the multiple facets of territorial systems in order to reproduce their richness. It invites readers to learn about the challenges, ideas, results and advances present in this domain.

The disruptive impacts of technological innovation on established industrial structures has been one of the distinguishing features of modern capitalism. In this

book, four leading figures in the field of Schumpeterian and evolutionary economic theory draw on decades of research to offer a new, 'history-friendly' perspective on the process of creative destruction. This 'history-friendly' methodology models the complex dynamics of innovation, competition and industrial evolution in a way that combines analytical rigour with an acknowledgement of the chaotic nature of history. The book presents a comprehensive analysis of

the determinants and patterns of industrial evolution, and investigates its complex dynamics within three key industries: computers, semiconductors, and pharmaceuticals. It will be of great value to scholars and students of innovation and industrial change, from backgrounds as varied as history, economics and management. Its coverage of new methodological tools is also useful for students who are new to evolutionary economic theory.

Traces the long history of some of the major ideas about cell division in animals, provides an account of the current knowledge about it, describes division in different kinds of cells, and proposes explanations of the mechanisms underlying the visible events. From experiments devised to test theories, shows that the forces necessary to deform animal cells to the degree shown in cytokinesis seem to originate from the interaction of linear polymers and motor molecules that play roles in force production, motion, and shape change that occur in other phases of the cell's biology. Susan Standring, MBE, PhD, DSc, FKC, Hon FAS, Hon FRCS Trust Gray's. Building on over 160 years of anatomical excellence In 1858, Drs Henry Gray and Henry Vandyke Carter created a book for their surgical colleagues that established an enduring standard among anatomical texts. After more than 160 years of continuous

publication, Gray's Anatomy remains the definitive, comprehensive reference on the subject, offering ready access to the information you need to ensure safe, effective practice. This 42nd edition has been meticulously revised and updated throughout, reflecting the very latest understanding of clinical anatomy from the world's leading clinicians and biomedical scientists. The book's acclaimed, lavish art programme and clear text has been further enhanced, while major advances in imaging techniques and the new insights they bring are fully captured in state of the art X-ray, CT, MR and ultrasonic images. The accompanying eBook version is richly enhanced with additional content and media, covering all the body regions, cell biology, development and embryogenesis – and now includes two new systems-orientated chapters. This combines to unlock a whole new level of related information and interactivity, in keeping with the spirit of innovation that has characterised Gray's Anatomy since its inception. Each chapter has been edited by international leaders in their field, ensuring access to the very latest evidence-based information on topics Over 150 new radiology images, offering the very latest X-ray, multiplanar CT and MR perspectives, including state-of-the-art cinematic rendering The downloadable Expert Consult eBook version included with your (print) purchase allows you to easily search all of the text, figures, references and videos from the book on a variety of devices Electronic enhancements include additional text, tables, illustrations, labelled imaging and videos, as well as 21

pecially commissioned 'Commentaries' on new and emerging topics related to anatomy. Now featuring two extensive electronic chapters providing full coverage of the peripheral nervous system and the vascular and lymphatic systems. The result is a more complete, practical and engaging resource than ever before, which will prove invaluable to all clinicians who require an accurate, in-depth knowledge of anatomy.

Gas Age Frontiers Media SA Phase transfer catalysis is a sophisticated chemical technique which can be used to perform a variety of chemical reactions under mild conditions and with improved control. Since the concept was developed, both the theoretical and practical synthetic applications have seen considerable development, to

the point where the technique can be applied to many areas of chemistry. Thus, phase transfer methods are now utilized in many applications, from research chemistry to full-scale production, where the benefits of faster, cleaner and more selective reactions are required. In this new book, the editors have brought together a range of contributors, each of whom is working at the forefront of the technology, to provide a clear, concise and authoritative review of this important area of chemistry. Industrial and academic chemists working on the synthesis, scale-up,

production or analysis of a wide range of chemical products will find this book an essential reference on phase transfer technology.

Strategic Management: Concepts and Cases: Competitiveness and Globalization

Because capillary electrophoresis (CE) is driving the automation of manual and semi-manual techniques, conserves precious samples, and minimizes the use of hazardous organic chemicals, it constitutes a powerful new methodology for the clinical laboratory. In Clinical and

Forensic Applications of Capillary Electrophoresis, John R. Petersen and Amin A. Mohammad, along with a panel of leading basic and clinical investigators, review those CE methods that are now replacing many routine serum and blood tests in clinical and forensic laboratories. Major areas reviewed include the coating of columns; the analysis of serum, urine, and CSF proteins and paraproteins; abnormal hemoglobins and hemoglobin Alc; peptides, amino and organic acids; therapeutic drugs; drugs of abuse; viral load; and short tandem repeats

(STR). The methods discussed include capillary zone, micellar, electrokinetic, capillary gel, and nonaqueous electrophoresis.

The authors show how a variety of detection methods (UV-visible, fluorescence, and MS) can be used in conjunction with CE to detect a broad array of analytes, ranging from serum proteins to PCR products to drugs of forensic importance. Innovative and highly practical, Clinical and Forensic Applications of Capillary Electrophoresis demonstrates the power and versatility of CE not only to develop new assays, but also to markedly simplify

today's clinical and forensic laboratory methodology.

Essays on Frege's Basic Laws of Arithmetic

Post-translational modifications (PTMs) are widely employed by all living organisms to control the enzymatic activity, localization or stability of proteins on a much shorter time scale than the transcriptional control. In eukarya, global analyses consistently reveal that proteins are very extensively phosphorylated, acetylated and ubiquitylated. Glycosylation and methylation are also very common, and myriad other PTMs, most with a proven regulatory potential, are being discovered continuously. The

emergent picture is that PTM sites on a single protein are not independent; modification of one residue often affects (positively or negatively) modification of other sites on the same protein. The best example of this complex behavior is the histone “bar-code” with very extensive cross-talk between phosphorylation, acetylation and methylation sites. Traditionally it was believed that large networks of PTMs exist only in complex eukaryal cells, which exploit them for coordination and fine-tuning of various cellular functions. PTMs have also been detected in bacteria, but the early examples focused on a few important regulatory events, based mainly on protein phosphorylation. The

global importance (and abundance) of PTMs in bacterial physiology was systematically underestimated. In recent years, global studies have reported large datasets of phosphorylated, acetylated and glycosylated proteins in bacteria. Other modifications of bacterial proteins have been recently described: pupylation, methylation, sirtuin acetylation, lipidation, carboxylation and bacillithiolation. As the landscape of PTMs in bacterial cells is rapidly expanding, primarily due to advances of detection methods in mass spectrometry, our research field is adapting to comprehend the potential impact of these modifications on the cellular physiology. The field of protein phosphorylation, especially of the Ser/Thr/Tyr type, has been profoundly transformed. We have become aware that bacterial kinases phosphorylate many protein substrates and thus constitute regulatory nodes with potential for signal integration. They also engage in cross-talk and eukaryal-like mutual activation cascades. The regulatory potential of protein acetylation and glycosylation in bacteria is also rapidly emerging, and the cross-talk between acetylation and phosphorylation has been documented. This topic deals with the complexity of the PTM landscape in bacteria, and focus in particular on the physiological roles that PTMs play and methods to study them. The topic is associated to the 1st International Conference on Post-Translational Modifications in Bacteria (September 9-10, 2014, Göttingen, Germany). Cumulated Index Medicus
