A C++ Reading List by John Lakos | | InformIT

Developing a large-scale software system in C++ requires more than just a sound understanding of the logical design issues covered in most books on C++ programming. To be successful, you will also need a grasp of physical design concepts that, while closely tied to the technical aspects of development, include a dimension with which even expert software developers may have little or no experience.

[Programming in the large and programming in the small...](#)
In software engineering, programming in the large and programming in the small describe two different approaches to writing software. The terms were coined by Frank DeRemer and Hans Kron in their 1975 paper "Programming-in-the-large versus programming-in-the-small". A similar, later distinction is Ousterhout's dichotomy between system programming languages (for components) and scripting ... Large-scale C++ Software Design - John Lakos - Google Books

Large Scale C++

This is the definitive book for all C++ software professionals involved in large development efforts such as databases, operating systems, compilers, and frameworks. It is the first C++ book that actually demonstrates how to design large systems, and one of the few books on object-oriented design specifically geared to practical aspects of the C++ programming language.

A M F L T E - index-of.co.uk

A technical description of design problems and solutions for large C++ projects. In addition to logical design (functions, classes, etc.), this book focuses on physical design (files, directories, etc.) as an important aspect of large software projects. Although C++ is used throughout, many, but not all, of the concepts apply to other environments.

Ultra-large-scale system is a term used in fields including Computer Science, Software Engineering and Systems Engineering to refer to software intensive systems with unprecedented amounts of hardware, lines of source code, numbers of users, and volumes of data. The scale of these systems gives rise to many problems: they will be developed and used by many stakeholders across multiple organizations, often with conflicting purposes and needs; they will be constructed from heterogeneous parts with
