Anesthesia Outside of the Operating Room is a comprehensive, up-to-date textbook that covers all aspects of anesthesia care in OOR settings, from financial considerations to anesthetic techniques to quality assurance. With increasing numbers of procedures such as cardiac catheterization and imaging taking place outside of the main OR, anesthesia providers as well as non-anesthesia members of the patient care team will find this book critical to their understanding of the principles of anesthesia care in unique settings which may have limited physical resources. The book includes chapters on patient monitoring techniques, pre-procedure evaluation and post-procedure care, and procedural sedation performed by non-anesthesia providers. Its authors address problems of anesthesia that have unique answers in OOR settings, such as patient transport and cardiac arrest, and discuss technological progress and considerations for the future. The text also covers surgical procedures and anesthetic considerations by procedure location, such as radiology, infertility clinics, field and military environments, and pediatric settings, among many others Select guidelines from the American Society of Anesthesiologists (ASA) are provided as well. Edited by the senior faculty from Harvard Medical School and with contributions from other academic institutions, Anesthesia Outside of the Operating Room provides a unique and convenient compendium of expertise and experience.

Because of his international prominence, Professor Khan has been able to gather an enviable list of experts in the field to contribute their experience with airway management in a multitude of clinical settings. The critical appraisal of the airway authored by the editor, Professor Khan, sets the stage for the important preoperative tests that may alert the clinician of the potential for a difficult airway so that appropriate plans can be made. The formidable "guest list" of authors spans the world and encompasses clinicians from Malaysia, the United States, Pakistan, India, Denmark, Singapore, Germany, Canada and Iran. What is equally remarkable is the list of topics discussed in the textbook and the varied clinical settings in which airway management is likely to pose particular and unique challenges: pediatrics; patients with cervical spine injury and those with traumatic brain injury; ambulatory surgery; patients with obstructive sleep apnea and obstetric patients. The book also addresses the latest in technological advances that can aid the clinician in diagnosing and managing the difficult airway, such as ultrasonography and also describes surgical approaches to managing the difficult airway, such as cricothyrotomy. Finally, underscoring the truly international appeal of the textbook and acknowledging the potential technological limitations of the developing world, a chapter

is dedicated to the use of indigenous devices in managing the difficult airway.

This is a concise, up-to-date reference on anesthesia for urological surgery.

Urological anesthesia is not recognized as a specialty, and a majority of anesthesiologists and nurse anesthetists will provide anesthesia for these patients. Advances in urological procedures, the advent of treatment of patients with strong anticoagulant and antiplatelet medications, and the demographics of urology patients

(many of whom are young or elderly) present challenges for the anesthesiologist and have necessitated changes in anesthesia practice. The last volume on this topic was published in 2000, and the time is right for a fresh presentation of contemporary expertise in anesthesia for urological surgery. The book provides a brief review of renal physiology and pharmacology then addresses anesthesia for each major group of urological procedures (e.g., endoscopic, office-based, laparoscopic and robotic, nephrolithotripsy, renal transplantation, etc.) and in special populations, including the geriatric patient, the pediatric patient, and the pregnant patient. Separate chapters discuss the unique challenges of positioning the patient, and of managing the patient taking anticoagulant and antiplatelet medication, and the chapter on pain management addresses common and important perioperative concerns. Ambulatory anesthesia is used for surgical procedures where the patient does not need to stay overnight in the hospital. The same anesthetics that are used in the operating room setting are used in the ambulatory setting, including general, regional and local anesthetics. Sedation anesthetics are also given in the ambulatory setting. This issue will cover best practices and procedures for perioperative care, regional anesthesia, pediatric anesthesia, administering office anesthesia, and more.

This text presents a comprehensive and state-of-the-art approach to renal mass biopsy, and reviews current techniques for obtaining samples, proper tissues processing, indications for biopsy, and treatment outcomes. Sections address preliminary issues faced by urologists, pathologists, interventional radiologists, oncologists, and nephrologists who may be initially reconsidering the role for RMB including clinical decision making, financial considerations, misconceptions, sampling errors, and understanding limitations. Basic techniques and set-up, navigational tools, and tips and tricks to maximize sampling and avoid complications is also included. Sections also address patient selection, pre-biopsy considerations, technical aspects of the most common techniques and equipment, and image guidance systems. Pathological considerations include role of fine needle aspirations, touch preparation, core biopsies, immunohistochemistry, and classification schemata. The text concludes with chapters on future directions and improvements in diagnostic imaging, future developments in optical biopsies (confocal microscopy), and ancillary studies on renal masses. Written by experts in the field of urology and pathology, *Renal Mass Biopsy* is your go to resource for techniques and outcomes for the treatment of renal masses.
