Concepts of Biology is
designed for the single-
semester introduction to
biology course for non-
science majors, which for
many students is their
only college-level science
course. As such, this
course represents an
important opportunity for
students to develop the
necessary knowledge,
tools, and skills to make
informed decisions as
they continue with their
lives. Rather than being

mired down with facts and
vocabulary, the typical non-understand--and
science major student
needs information
presented in a way that is
easy to read and
understand. Even more
importantly, the content
should be meaningful.
Students do much better
when they understand why
biology is relevant to their
everyday lives. For these
reasons, Concepts of
Biology is grounded on an
evolutionary basis and
includes exciting features
that highlight careers in
the biological sciences
and everyday applications
of the concepts at
hand. We also strive to
show the
interconnectedness of
topics within this extremely
broad discipline. In order
to meet the needs of
today's instructors and
students, we maintain the
overall organization and
coverage found in most
syllabi for this course. A
strength of Concepts of
Biology is that instructors
can customize the book,
adapting it to the approach
that works best in their
classroom. Concepts of
Biology also includes an
innovative art program that
incorporates critical
thinking and clicker

questions to help students
apply--key concepts.

Assists policymakers in evaluating the appropriate scientific methods for detecting unintended changes in food and assessing the potential for adverse health effects from genetically modified products. In this book, the committee recommended that greater scrutiny should be given to foods containing new compounds or unusual amounts of naturally occurring substances, regardless of the method used to create them. The book offers a framework to guide federal agencies in selecting the route of safety assessment. It identifies and recommends several pre- and post-market approaches to guide the assessment of unintended compositional changes that could result from genetically modified foods and research avenues to fill the knowledge gaps.
